

Core exercises/ Kernspiere - oefeninge

deur Rudolph Cloete, ASA en VSAAV Vlak III

In sports, the core is highly involved in nearly every movement. Force is transferred between the lower body and the upper body through the core. A weak core is not able to control excessive movement, which allows energy to leak instead of transferring it from one segment to the next.

Die kern/"core" stabiliseer die liggaam en versprei dan die krag effektief na daardie deel van die liggaam waar dit benodig word.

Nadat ek meer aandag aan kernspieroefeninge begin gee het, het my atlete se prestasie drasties verbeter. Hier volg die program wat my atlete volg: die demonstrant is Liza Hart, 'n junioratleet/Onder 15-atleet.

1. Opwarm: draf + strek vir 5 minute
